

## PROJECT FACT SHEET

### Roosevelt Boulevard From Spruce Street to Dodecanese Boulevard Pavement and Stormwater Rehabilitation Improvements

#### PROJECT DESCRIPTION

The City of Tarpon Springs with American Consulting Engineers of Florida, LLC, is completing the design and preparation of construction plans for the subject project. Project limits are shown on a map on the reverse side of this sheet.

The project will serve to improve the existing stormwater infrastructure and pavement conditions, provide better access for vehicles and pedestrians, and generally improve the appearance of the roadway. The City is requesting community input on the project prior to finalizing the design.

The recommended improvements include: reconstruction of the existing roadway and replacement with a new 2-lane urban asphalt street with concrete curb and gutter, concrete sidewalk along the west side and new stormwater inlets and pipes throughout the corridor. A shallow drainage swale (ditch) is proposed along the west side to improve stormwater conveyance conditions. Landscaping improvements are also proposed.

The reconstructed street design includes: 10 ft. wide travel lanes, water-resistant roadway base course, improved intersection turn radii and concrete aprons for driveway connections. The new street will be slightly higher than the existing street (a max. of 1-1.5 ft. in some locations) to improve drainage conditions.

The Preliminary Design plans showing the recommended improvements will be on display at the meeting for review and comment. Plans are also available on the City website (<http://www.ctsfl.us>) for download and review.

#### PROJECT SCHEDULE

PROJECT MILESTONE	ESTIMATED COMPLETION DATE
Preliminary Design	June 2010
Final Design	September 2010
Begin Construction	January 2011

#### PROJECT COST

The estimated preliminary construction cost of the recommended improvements is \$550,000 and is being funded jointly thru the Penny for Pinellas Fund and the City Stormwater Fund.
