

YOUR SURVIVAL KIT

Having a survival kit can help you stay safer during and after a storm. Circle the important things that belong in your survival kit.

Answers:
radio, flashlight, batteries, books,
nonperishable food, water bottle,

WHO SHOULD YOU CALL?

It's important that you have a list of phone numbers to call should a hurricane threaten. What phone numbers do you need? Write them down in the spaces provided:

Life-threatening emergencies: 9-1-1

Pinellas County Emergency Management: (727) 464-3800

My home phone number: _____

Mom's work number: _____

Mom's cell number: _____

Dad's work number: _____

Dad's cell number: _____

Name and phone number of a neighbor or relative: _____

Name and phone number of an out-of-town contact: _____

SURVIVING THE STORM

IT'S EVERYONE'S RESPONSIBILITY

DO YOU HAVE A PET?

Remember to include your pet in your hurricane plans. They are relying on you to keep them safe. What do you have to bring for your pet when a hurricane threatens?

AFTER THE STORM

If a hurricane hits Pinellas County, things may look very different. Familiar places like grocery stores, movie theaters and malls may be closed for a while until they can be repaired. You might also have to live somewhere else for a while if your home is damaged. What do you think you can do to help make this period easier on yourself and your family?

Be sure to help your parents or other adults make a plan by using Pinellas County's Emergency Management website at www.pinellascounty.org/emergency.

WHAT IS A HURRICANE?

A hurricane is a large tropical weather system with winds of 74 mph or faster that rotate around the center of the storm. A hurricane forms over warm tropical oceans and is powered by evaporation and condensation of warm water. The clouds and thunderstorms move in a circle around the center of the storm called an eye. In other areas of the world, hurricanes are called cyclones or typhoons. Same type of storm, different names.

Dangers that hurricanes bring include **storm surge**, **high winds**, **tornadoes** and **flooding** from heavy rain.

WHAT IS STORM SURGE?

Storm Surge kills more people than any other part of a hurricane. You can see how storm surge works if you fill a small plate with water then blow across it. What happens to the water on the other side of the plate? The water splashing over the edge is storm surge on a small scale. In a hurricane, this surge can push as much as 24 feet of water into areas of Pinellas County. People are ordered to evacuate from places that will get storm surge. Is your home in an evacuation area? If so, you may have to evacuate when a hurricane is coming.

FIND YOUR EVACUATION ZONE:

Call (727) 453-3150 and enter your home phone number, or visit www.pinellascounty.org/emergency/knowyourzone.htm and enter your home address.
